

Hazardous Substances Process Management

Are you searching for a practical and effective approach to RoHS? Learn how to maximize your return on investment (ROI), while minimizing your liability.

With today's perplexing hazardous substances control requirements and regulations, ensuring comprehensive compliance for all of your products is becoming increasingly complex. An approach focusing on managing your processes, rather than relying on product testing, provides the most effective path to successful hazardous substances control, while reducing your RoHS liability.

Hazardous Substances Process Management Training is a 3 day course providing students with an understanding of the importance of process management in controlling hazardous substances to ensure product compliance with current regulations and requirements, how to successfully implement a hazardous substances process management program and how to effectively assess the program once it's implemented.

Key Topics

Day 1:

- Context of Environmental Regulations, **RoHS, WEEE, ELV, Packaging, Battery, China RoHS...**
- Interest of the IECQ HSPM QC 080000 specification
- Presentation of IECQ HSPM QC 080000 requirements
- Getting the internationally recognized IECQ HSPM certificate

Day 2:

- Presentation of IECQ HSPM QC 080000 Specification technical requirements, clauses 4 - 8
- Link with the ISO 9001:2008 requirements
- Actions for implementing the IECQ HSPM program

Day 3:

- Review of IECQ HSPM QC 080000 – Day 2, clauses 1 to 8
- Assessment requirements
- Tools for conducting a technical hazardous substances process management assessment

Who should attend?

Executives, quality managers, managers, supervisors, professionals, audit team members, and anyone desiring to understand hazardous substances process management implementation and assessment should attend.
